There are 2 types of RCD - **Latching** and **Non-Latching**; also termed active & passive. Both types are accepted by British Standards and it is up to the user to choose the type of RCD most suitable for their application.

NON-LATCHING (active) RCD's switch off when the power to them is turned off. Every time the supply to the RCD is interrupted it will trip and will need to be reset.

LATCHING (passive) RCD's "remember" the state they were in prior to the power being switched off.

Surge Protection Advice

Hundreds of power surges can occur in your home and office every day. The switching on/off of fluorescent lights and household appliances like refrigerators, washing machines and tumble dryers can cause power surges and spikes.

Masterplug Surge Warranty

Confident in our 'state of the art' technology Masterplug Surge products come with a 'Connected Equipment Warranty'. In the unlikely event that a surge passes through this protection device within 3 years of purchase and damage occurs to the connected equipment, Masterplug will pay up to the amount shown on the product packaging to repair or replace the equipment. Masterplug stands by the quality of its Surge products.
